# 1 CYPRESS

## 1.1 *Prerequisite*

Participants must have their own desktop/laptop with Windows OS. Also, participants should have node.js software installed.

## 1.2 Download and Installation Steps

**Step 1** Open the Command prompt and check for node.js software by typing the command ***node --version***

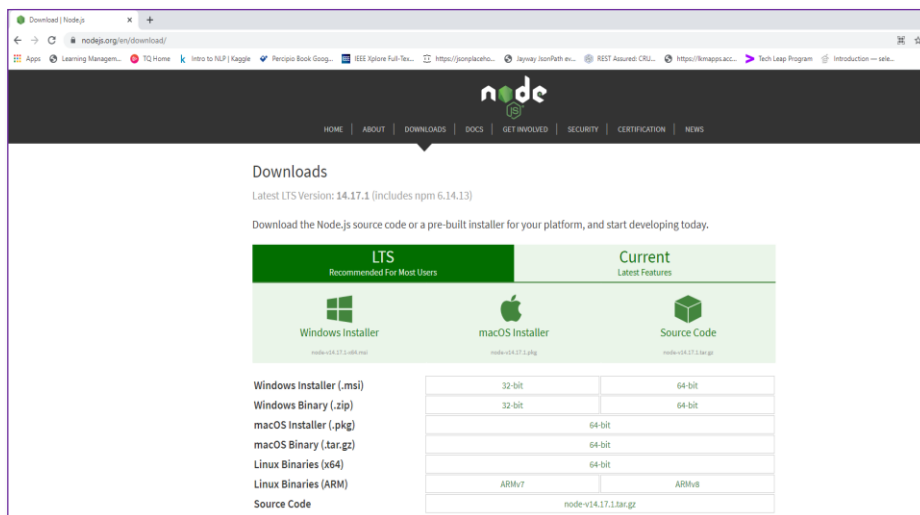

```
Microsoft Windows [Version 10.0.18363.1621]
(c) 2019 Microsoft Corporation. All rights reserved.

C:\Users\aswani.kumar.avilala>node --version
v12.14.0

C:\Users\aswani.kumar.avilala>
```

**Note:** After typing the command ***node --version***, hit enter key, The result of this command should be the version of the node.js. In case if the result is ***node is not recognized as a command*** then look for the installation of node.js as shown in the next steps.

**Step 2** To install node.js in your system download the software from the URL: <https://nodejs.org/en/download/>

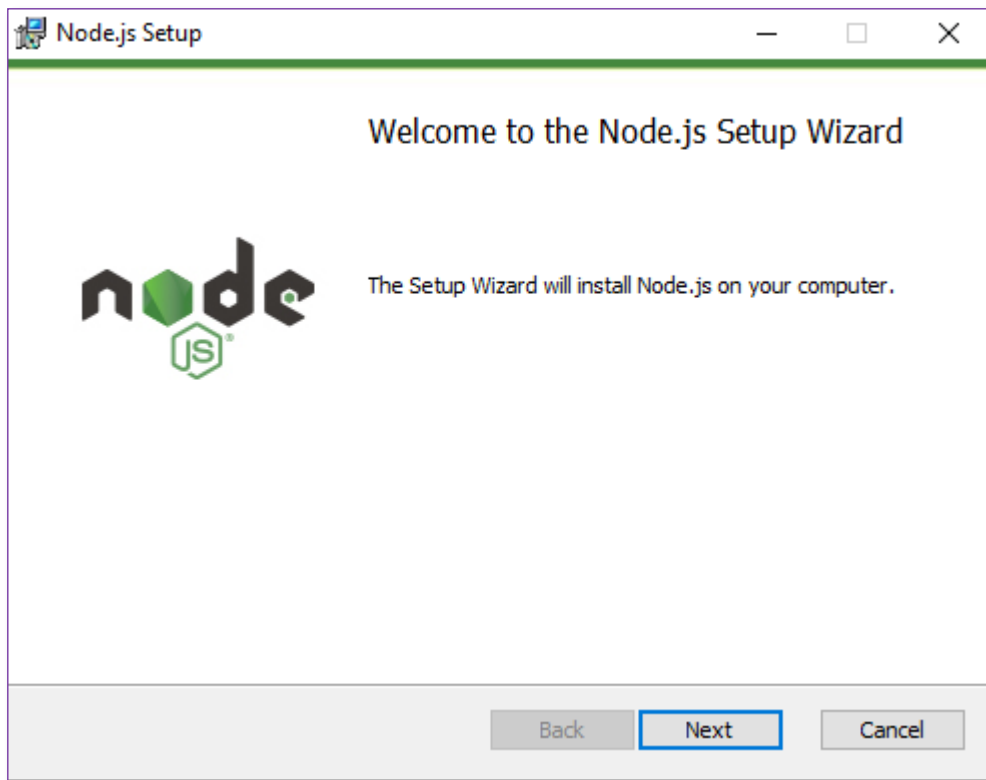

Once the download page appears in the browser then, click on the Windows installer (.msi) preferably 64 bit. After download, you should be able to see the below software in your downloads path.

**Step 3**

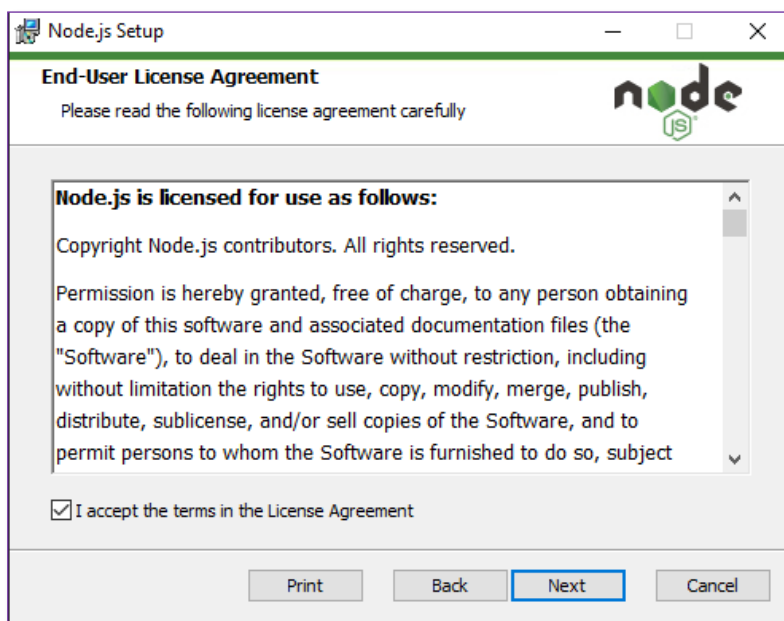

Double click on the downloaded file and you should be able to see the below window for the installation of the software.

**Note:** The moment the setup window is up, a pre-configuration check will happen and then the Next button will be enabled after some time. Wait until the Next button appears.

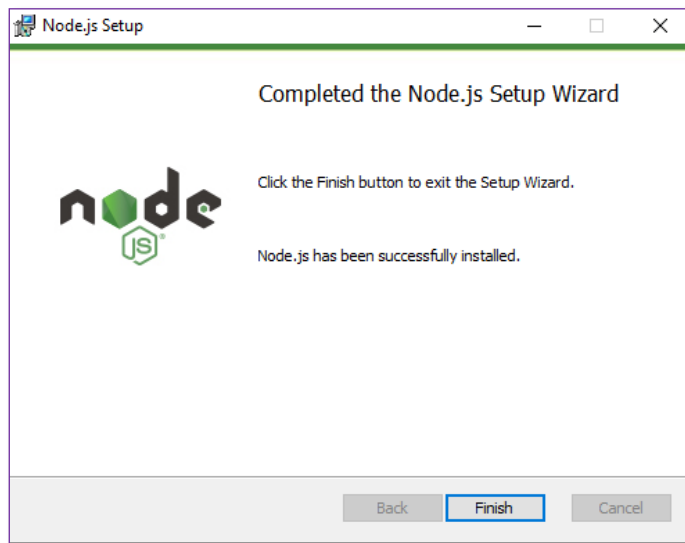

**Step 4**

Click Next by checking the License agreement.

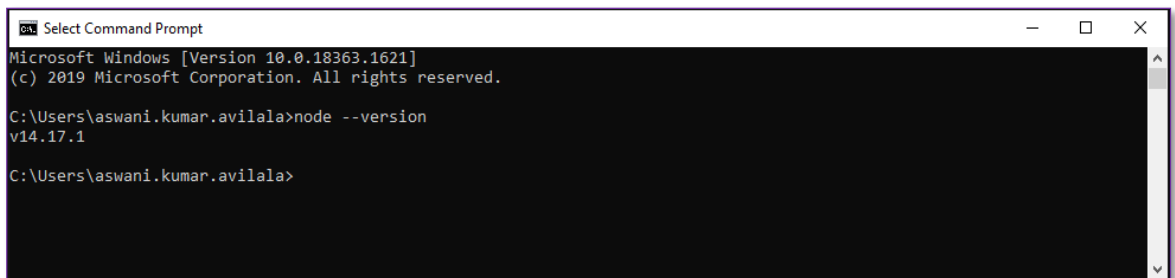

**Step 5**

Give Next → Next and complete the installation of the software. Finally, you must be able to see that node.js is installed successfully.

**Step 6**

Open the Command prompt and check for node.js software by typing the command ***node --version***

**Note:** After typing the command ***node --version***, hit enter key, The result of this command should be the version of the node.js. In this case its version 14.7.1

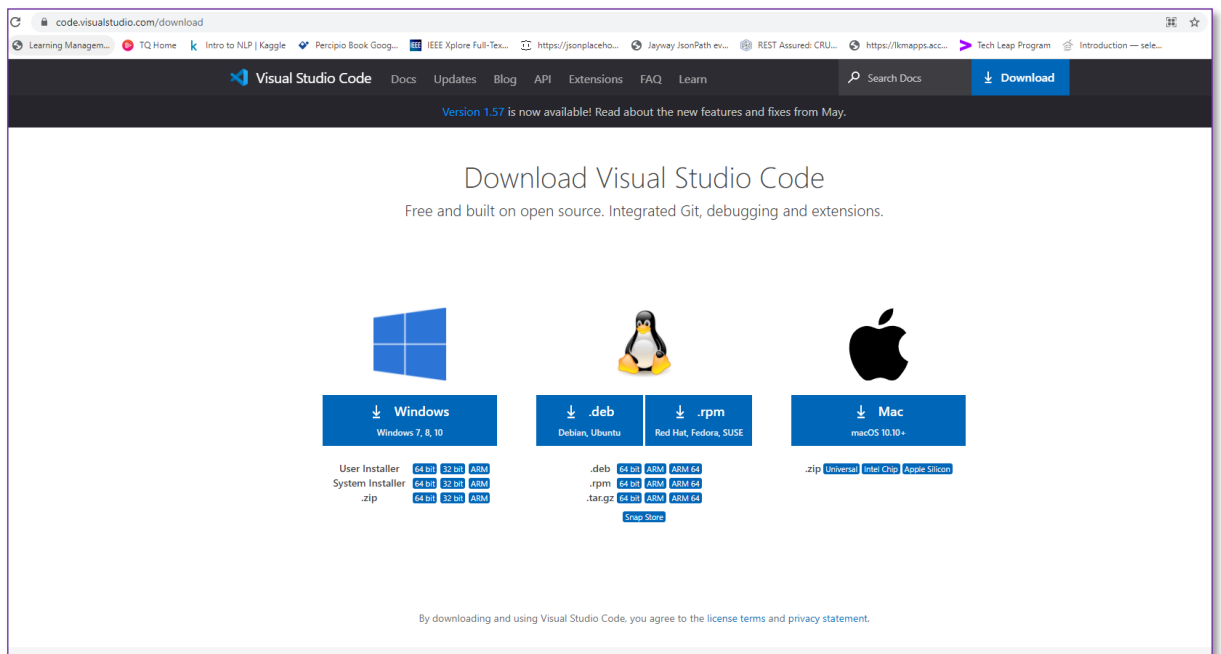

**And this is the end of the node.js software installation.**

## Step 7

Now Download the editors for Cypress codes. Visual Studio Code is the standard editor that can be used for this course.

### Visual Studio Code URL →

<https://code.visualstudio.com/download>

**Note:** Click to download User Installer / System Installer(Recommended) – 64 bit version. Below is the software .exe file you can see in the downloads folder after the download is completed successfully.

 VSCodeSetup-x64-1.57.0

OR

 VSCodeUserSetup-x64-1.57.0

## Step 8

After downloading either of the software now you should be able to launch the Visual Studio Code IDE.

## Step 9

### Cypress Installation

- 1) Type the command using node package manager (npm) to install cypress  
***npm install cypress --save-dev***
- 2) To check the cypress version just enter the command and check for  
***npx cypress -version***

```
C:\Users\aswani.kumar.avilala>npm install cypress --save-dev
npm WARN idealTree Removing dependencies.cypress in favor of devDependencies.cypress
up to date, audited 267 packages in 3s
23 packages are looking for funding
  run `npm fund` for details
found 0 vulnerabilities
```

```
C:\Users\aswani.kumar.avilala>npx cypress --version
Cypress package version: 7.5.0
Cypress binary version: 7.5.0
Electron version: 12.0.0-beta.14
Bundled Node version:
14.15.1
```
